Attempt 1 of 1

Written Oct 3, 2023 5:00 PM - Oct 3, 2023 5:36 PM

Released Oct 4, 2023 8:00 AM

Attempt Score 85.1 / 100 - 85.1 % Overall Grade (Highest Attempt) 85.1 / 100 - 85.1 %

Python Questions Question 1 1 / 1 point [1 Point] Which of the following is **TRUE** in Python? Select all that apply. ✓ A) Python has syntax that allows developers to write programs with fewer lines than some other programming languages. ✓✓ B) Python runs on an interpreter system. This means that prototyping can be very quick. ✓✓ C) Python works on different platforms (Windows, Mac, Linux, Raspberry Pi, etc). D) Python can be treated in a procedural way but not a an object-oriented way or a functional way. ✓✓ E) Python has a simple syntax similar to the English language. ▼ Hide question 1 feedback See https://www.w3schools.com/python/python_intro.asp Question 2 1 / 1 point [1 Point] Which of the following is true in Python? Select all that apply. → Python lists can be used for membership tests, eliminating duplicates, union, intersection, difference and symmetric difference

✓ ✓ Python is a loosely typed language Question 3 1 / 1 point

[1 Point] In Python, the data type is set when you assign a value to a variable.

✓ () A) True B) False

Question 4 1 / 1 point

[Point] Which of the following is true in Python? Select all that apply.

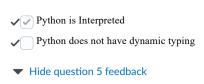

✓ Constants are part of the Python specification

✓ Python local variables are restricted to a function or class

1 / 1 point Question 5

[1 Point] Which of the following is true in Python? Select all that apply.

✓ ✓ Python is object-oriented

Python is a **dynamically typed** language. It doesn't know about the type of the variable until the code is run.

1 / 1 point Question 6 [1 Point] Which of the following is **TRUE** in Python? Select all that apply. \checkmark A) Variables that are created outside of a function are known as "global" variables. B) Global variables must start with an underscore. ✓✓ C) Global variables can be used by everyone, both inside of functions and outside. ✓ D) Global variables should use only uppercase letters. ▼ Hide question 6 feedback See https://www.w3schools.com/python/python variables global.asp Question 7 0 / 2 points [2 Points] Consider the following Python code: x = "awesome" def myfunc(): x = "fantastic"print("Python is " + x)myfunc() print("Python is " + x)What gets printed? A) Python is awesome Python is fantastic ➤ B) Python is fantastic Python is fantastic ⇒ C) Python is fantastic Python is awesome 2 / 2 points **Question 8** [2 Points] Consider the following Python code: >>> x = ("apple", "banana", "cherry")>>> print(x) >>> print(type(x))

What gets printed?

What gets printed?

A) {'banana', 'cherry', 'apple'}

B) {'apple', 'banana', 'cherry', 'apple'}

▼ Hide question 10 feedback

See https://www.w3schools.com/python/trypython.asp?filename=demo_sets_duplicate_error

Question 11 2 / 2 points [2 Points] Consider the following Python code: >>> for i in range(5,10): print(i) What values get printed on separate lines? 5678910 678910 **5** 6 7 8 9 Question 12 2/2 points [2 Points] Which of the following are true statements for JSON? Select all that apply. ✓✓ light-weight ✓ ✓ text-based Question 13 2 / 2 points [2 Points] Consider the following example from w3schools.com. <!DOCTYPE html> <html> <body> <script> const text = '{"name":"John", "age":"function() {return 30;}", "city": "New York"}'; const obj = JSON.parse(text); obj.age = eval("(" + obj.age + ")"); document.getElementById("demo").innerHTML = obj.name + ", " + obj.age(); </script> </body> </html> What string is displayed in the browser window?

A) <a syntax error>

✓ B) John, 30

C) John, function() {return 30;}

▼ Hide question 13 feedback

See https://www.w3schools.com/js/tryit.asp?filename=tryjson_parse_function

Question 14 1.667 / 2 points

[2 Points] Select all statements that are TRUE regarding JSON vs. XML. Select all that apply.

⇒ ✓ ✓ JSON can be parsed by a standard JavaScript function

XML has to be parsed with an XML parser

✓ XML cannot be used to receive data from a web server
JSON is quicker to read and write than XML
ズ ✓ JSON is parsed into a ready-to-use JavaScript object
⇒ ✓✓ JSON is shorter than XML
Question 15 2 / 2 points
[2 Points] Which of the following are true statements for JSON? Select all that apply.
✓ Not a markup language
Not a data-interchange format
✓ JSON is used to send data between computers
✓ JSON is language independent
▼ Hide question 15 feedback
JSON is language independent because 1) The JSON syntax is derived from JavaScript object notation, but the JSON format is text only. and 2) Code for reading and generating JSON exists in many programming languages.
JSON is a "data-interchange" format, not a "document" format. In fact JSON is used 99% in a data stream, and never stored in a document. JavaScript is not a document format, either, and JSON is a subset of JavaScript. DOCX, RTF, and XLS are "document formats."
See: https://www.w3schools.com/js/js_json_intro.asp
Question 16 0.5 / 1 point
[1 Point] JSON is better than XML because Select all that apply.
➤ A) JSON doesn't use end tag
⇒ 🗶 🔲 B) JSON is parsed into a ready-to-use JavaScript object.
⇒ ✓ C) JSON is shorter
D) XML is much more difficult to parse than JSON.
Question 17 1 / 1 point
[1 Point] JSON objects are identical to JavaScript Objects.
A) True
✓ ● B) False
Question 18 1 / 1 point
[1 Point] Select all the statements that are true of JSON. Select all that apply.
✓ A) The MIME type for JSON text is "text/json"
- A) THE MINNE LYPE TOLI JOON LEXT IS LEXT/JSON
B) The MIME type for JSON text is "application/json"
C) The file type for JSON files is ".json"
✓ □ D) The file type for JSON files is ".js"

Question 19 1 / 1 point

 $\ensuremath{[1\ Point]}$ JSON values can be one of the following data types. Select all that apply.

✓✓ A) a boolean	
✓✓ B) a number	
✓ C) nil	
✓ D) undefined	
▼ Hide question 19 feedback	
See https://www.w3schools.com/js/js_json_datatypes.asp	
Question 20	1 / 1 point
[1 Point] JSON is like XML because Select all that apply.	
✓✓ A) Both JSON and XML are "self describing" (human readable)	
✓✓ B) Both JSON and XML are hierarchical (values within values)	
✓ C) Both use end tags	
✓ D) Both require similar bandwidth	
Question 21	1 / 1 point
[1 Point] The drawback of the eval() function is overcome with JSON.parse().	
✓ ● A) True	
B) False	
Networking Questions	
Networking Questions Question 22	2 / 2 points
	2 / 2 points
Question 22	2 / 2 points
Question 22 [2 Points] Which of the following is NOT true regarding IP addresses:	2 / 2 points
Question 22 [2 Points] Which of the following is NOT true regarding IP addresses: A) IP address is a unique address	2 / 2 points
Question 22 [2 Points] Which of the following is NOT true regarding IP addresses: A) IP address is a unique address B) IPv6 addresses consist of 128 bits	2 / 2 points
Question 22 [2 Points] Which of the following is NOT true regarding IP addresses: A) IP address is a unique address B) IPv6 addresses consist of 128 bits ✓ ○ C) IP address is not required for a computer to communicate on a network	2 / 2 points
Question 22 [2 Points] Which of the following is NOT true regarding IP addresses: A) IP address is a unique address B) IPv6 addresses consist of 128 bits ✓ C) IP address is not required for a computer to communicate on a network D) IPv4 addresses consist of 32 bits	
Question 22 [2 Points] Which of the following is NOT true regarding IP addresses: A) IP address is a unique address B) IPv6 addresses consist of 128 bits C) IP address is not required for a computer to communicate on a network D) IPv4 addresses consist of 32 bits Hide question 22 feedback	
Question 22 [2 Points] Which of the following is NOT true regarding IP addresses: A) IP address is a unique address B) IPv6 addresses consist of 128 bits C) IP address is not required for a computer to communicate on a network D) IPv4 addresses consist of 32 bits Hide question 22 feedback An IP address is a unique address that is required of all computers that communicate on a	network.
Question 22 [2 Points] Which of the following is NOT true regarding IP addresses: A) IP address is a unique address B) IPv6 addresses consist of 128 bits C) IP address is not required for a computer to communicate on a network D) IPv4 addresses consist of 32 bits Hide question 22 feedback An IP address is a unique address that is required of all computers that communicate on a Question 23	network.
Question 22 [2 Points] Which of the following is NOT true regarding IP addresses: A) IP address is a unique address B) IPv6 addresses consist of 128 bits C) IP address is not required for a computer to communicate on a network D) IPv4 addresses consist of 32 bits Hide question 22 feedback An IP address is a unique address that is required of all computers that communicate on a Question 23 [2 Points] What's the purpose of NAT (network address translation)?	network.
Question 22 [2 Points] Which of the following is NOT true regarding IP addresses: A) IP address is a unique address B) IPv6 addresses consist of 128 bits C) IP address is not required for a computer to communicate on a network D) IPv4 addresses consist of 32 bits Hide question 22 feedback An IP address is a unique address that is required of all computers that communicate on a Question 23 [2 Points] What's the purpose of NAT (network address translation)? It replaces the private IP address with the public IP address on outgoing request	network.

▼ Hid	e questic	on 23 fe	edback

NAT replaces private IP addresses with a public IP address to allow multiple devices connected in a network to only use one public IP address. This is useful because IPv4 (not IPv6) has run out of addresses.

Question 24		2 / 2 points
[2 Points] What type of address is 79.125.0.0?		Private
Class B, Private Class B, Public	1. 0. 0. 0 - 127.2tt.2tt.2tt 128. 0. 0. 0 - 191.2tt.2tt.2tt 192. 0. 0. 0 - 223.2tt.2tt.2tt	10.0.0.0.0 - 10.25t.25t.25t 172.16.0.0 - 172.31.25t.25t 192.168.0.0 - 192.168.25t.25t

▼ Hide question 24 feedback

Class A Private addresses are in the range of 10.0.0.0 to 10.255.255.255. At the same time, Class B Private addresses begin from 172.16.0.0, so 79.125.0.0 is a Class A Public address.

Question 25

[2 Points] TCP is ____

A connection-oriented protocol

the best communication protocol for all modern applications

a connectionless protocol

good for scenarios where you don't need every packet to arrive at the destination

Hide question 25 feedback

TCP handles error correction and guarantees that messages are delivered to the destination. This protocol isn't good for applications such as video-streaming services, though, since the overhead for reliable communication would slow down the service too much.

Question 26 0 / 2 points

[2 Points] Class A IPv4 addresses include 256 networks, each with 16 million hosts. Which types of organizations hold Class A addresses?

A) Cable companies with DVRs

■ B) Large institutions like USC

⇒ C) ISPs

O) Smaller organizations

HTML Questions

Question 27 2 / 2 points

[2 Points] Consider the following HTML:

<HTML><HEAD>This is Text placed between <ODDTAG> HEAD markers .</HEAD></HTML>

Text placed between HEAD markers is not normally displayed, but in the case above it is displayed, and the <ODDTAG> is ignored and does not appear on the web page.

✓ ● a) Trueb) False

[2 Points] Select characters that to appear in HTML need to be represented with numeric or references (including ATTRIBUTE values). Select all that apply.	entity
& (ampersand)	
> (double quote)	
✓✓ ' (single quote)	
▼ Hide question 28 feedback	
Beside & Deside & Des	
Question 29	1 / 2 points
[2 Points] When using Universal Resource Identifiers (URIs) in HTML to reference other HTM different web sites, what are the required components of the URIs? Please select all that app	
ragment identifier	
✓ port	
name of resource	
⇒ ✓✓ host	
Question 30	2 / 2 points
[2 Points] What are true statements of HTML "anchors"? Select all that apply.	
✓ ✓ Must be unique within a document	
Fragment identifiers and related anchor names must be exactly matched	
To create a link to an anchor, you must use the 'id' attribute	
Question 31	2 / 2 points
[2 Points] Select all the statements that are TRUE of HTML Attributes. Select all that apply.	
✓ All HTML elements can have attributes	
Some attributes can be specified in the end tag	
✓ Attributes can come in name/value pairs like: name="value", or as single names.	
✓✓ HTML attributes provide additional information about HTML elements	
HTTP Questions	
Question 32	1.6 / 2 points
[2 Points] What are possible uses (functions) of a proxy server? Select all that apply.	
w White Listing	
⇒ ✓ Load Balancing	
⇒ ✓✓ Black Listing	
Caching	
✓ Red Listing	
	0.40
Question 33 [2 Points] What is the most 'popular' server response that even the lay (non technical) public about?	2 / 2 points would know
✓ 404 Page Not Found 200 OK	
301 moved permanently	
•	

Question 28

2 / 2 points

Question 34	2 / 2 points
[2 Points] Select any header that is used to improve cache performance. Select all that apply.	
✓ Expires	
Cache-control	
✓ Last-seen	
Question 35	0 / 2 points
[2 Points] What header is sent in a Response to indicate the host is running Apache 2.0?	
★	
Server: Apache 2.0	
Question 36 1.3	333 / 2 points
[2 Points] What Status Codes indicate a "redirect", because a resource has been moved? Select all that apply.	
⇒ ✓✓ 301	
⇒ √√ 302	
x ✓ 304	
Question 37	1 / 1 point
[1 Point] HTTP Strict-Transport-Security (HSTS) is a security feature that disallows insecure communication.	
✓ ● A) True	
B) False	
Question 38	1 / 1 point
[1 Point] The "keep-alive" feature / HTTP header is the same as "persistent connections."	
✓ ● A) True	
B) False	
CSS Questions	
Question 39	2 / 2 points
[2 Points] Consider the following CSS.	
.showNav ul li a:hover{color:#202022;}	
And the following HTML snippet.	
<div class="showNav"></div>	
<1i><	
<some html=""> </some>	
Which of these examples to replace <some html=""> will trigger the CSS?</some>	
4	•
✓ ● A) Some navigation	
OB) some navigation 	
C) 	

Question 40 1 / 2 points

 $\hbox{[2 Points] Consider the following example from w3 schools.com.}\\$

```
<!DOCTYPE html>
  <html>
  <head>
  <style>
  p:first-child i {
   color: blue;
  </style>
  </head>
  <body>
  I am a <i>strong</i> person. I am a <i>happy</i>
  person.
  I am a <i>handsome</i> person. I am a <i>student</i>
  person.
  </body>
  </html>
 Select all the actual behaviors of this code. Select all that apply.
   ⇒ ✓ ✓ strong is colored blue
 ⇒ ×  happy is colored blue

✓ student is colored blue

Question 41
 [2 Points] Consider the following example from w3schools.com.
 <!DOCTYPE html>
```

2/2 points

```
<html>
<head>
<style>
p.center {
 text-align: center;
 color: red;
p.large {
 font-size: 300%;
</style>
</head>
<body>
<h1 class="center">This is heading 1.</h1>
This is paragraph 1.
This is paragraph 2.
</body>
</html>
```

Select all the actual behaviors of this code. Select all that apply.

- ✓ heading 1 will be centered
- ✓ paragraph 2 will be red, center-aligned, and in a large font-size

Question 42 2 / 2 points

a style for tag.class has higher precedence than one for .class most websites use external CSS style sheets	
Question 43	1 / 1 point
[1 Point] Consider the following CSS:	
<pre>.showNav ul li a:hover{color:#202022;}</pre>	
And the following HTML snippet:	
<pre><div class="showNav"> Hello World </div></pre>	
Will "Hello World" color change as a result of the CS? Answer True=Yes, No=False.	
A) True	
✓ ● B) False	
▼ Hide question 43 feedback	
You need a sequence of nested " <any-tag> <a>" to trigger the CSS.</any-tag>	
Question 44	1 / 1 point
[1 Point] What is the difference between and ID Attribute and a CLASS Attribute in CSS?	
A) A CLASS Attribute can only be used once	
✓ ● B) An ID attribute can only be used once	
C) An ID Attribute can be used multiple times	
O) No difference

HTML DOM Questions

Question 45 2 / 2 points

[2 Points] Consider the following example from w3schools.com:

```
<!DOCTYPE html>
<html>
<body>
This is a p element
This is also a p element.
This is also a p element.
<button onclick="myFunction()">Try
it</button>
<script>
function myFunction() {
 var x =
document.getElementsByTagName("P");
 var i;
 for (i = 0; i < x.length-1; i++)
   x[i].style.backgroundColor =
"red";
 }
</script>
</body>
</html>
```

What happens when one clicks the "Try it" button?

- changes the background color of the last 2 P elements in this document
- changes the background color of all 3 P elements in this document

Question 46 2 / 2 points

[2 Points] Consider the following example from w3schools.com.

```
<!DOCTYPE html>
<html>
<body>
Click the button to create
a Text Node.
<button
onclick="myFunction()">Try
it</button>
<script>
function myFunction() {
document.createTextNode("Hello
World");
document.body.appendChild(t);
</script>
</body>
</html>
```

What happens when one clicks the "Try it" button?

Hello World is printed above the Try It buttor	1
✓ ● Hello World is printed next to the Try It butto	r
Hello World is printed below the Try It buttor	1

Question 47 2 / 2 points

[2 Points] Consider the following example from w3schools.com.

```
<!DOCTYPE html>
<html>
<body>
<a name="html">HTML
Tutorial</a><br>
<a name="css">CSS Tutorial</a><br>
<a name="xml">XML Tutorial</a><br>
<button onclick="myFunction()">Try
it</button>
<script>
function myFunction() {
 var x = document.anchors.length;
document.getElementById("demo").innerHTML
</script>
</body>
</html>
```

What happens when one clicks the "Try it" button?

- The number 3 is displayed next to the "Try it" button
- The number 4 is displayed below the "Try it" button
- ✓ The number 3 is displayed below the "Try it" button

Question 48 2 / 2 points

 $\hbox{[2 Points] Consider the following example from w3schools.com}.\\$

```
<!DOCTYPE html>
 <html>
 <body>
 This example uses the
 addEventListener() method to attach
 a click event to the document.
 Click anywhere in the
 document.
 <script>
 document.addEventListener("click",
 function(){
 document.getElementById("demo").innerHTML
 = "Hello World!";
 });
 </script>
 </body>
 </html>
What happens when one clicks TWICE anywhere in the document?
```

- ✓ "Hello World!" is printed below the Note
- "Hello World!" is printed above the Note
- Nothing

Question 49 2 / 2 points

[2 Points] Consider the following example from w3schools.com.

```
<!DOCTYPE html>
<html>
<body>
Nice paragraph.
<button onclick="myFunction()">Try
it</button>
<script>
function myFunction() {
 var x =
document.getElementById("demo");
 x.style.color = "green";
</script>
</body>
</html>
```

What happens when one clicks the "Try it" button?

'Nice paragraph' background color is changed to green

nothing

nothing Nice paragraph' color is changed to red ✓ (a) 'Nice paragraph' color is changed to green

'Nice paragraph' background color in unchanged	
Question 50	1 / 1 point
[1 Point] The DOM is available in Java and JavaScript implementations	
✓ ● True	
False	
Question 51	1 / 1 point
[1 Point] What is the "novel" idea that Tim Berners-Lee invented?	
√ Hyperlinking	
Hypercard	
Deep Linking	
HTML and CSS	
▼ Hide question 51 feedback	
Before Hyperlinking was invented, there was no way to jump from one document from one of another computer on a different Internet address.	computer to
Question 52	1 / 1 point
[1 Point] In HTML, which element do we use to create an ordered list?	
○ <	
<pre><rdered_list></rdered_list></pre>	
√	
	
▼ Hide question 52 feedback	
We use the tag to create the ordered list and we nest tags within to create list elem	nents.
Question 53	1 / 1 point
[1 Point] How many heading tags are there in HTML?	
\bigcirc 3	
○ ○ 8	
√ 6	
▼ Hide question 53 feedback	
There exists <h1> through <h6></h6></h1>	
JavaScript / RegEx Questions	
Question 54	2 / 2 points
[2 Points] Consider the following guidelines for a security policy for passwords:	
 at least 8 characters combination of upper- and lower-case characters one or more digits not a dictionary word 	
Select all that apply.	

✓✓ Should be avoided

```
✓ They provide strong security

	✓ They are better than using Diceware

✓ They are no longer considered secure

Question 55
                                                                                            1 / 2 points
 [2 Points] Select all the JavaScript statements that are syntactically correct.
  ⇒ ✓ var multipleValues = [];
  ⇒ ✓ var multipleValues = new Array();
  ⇒ x   var multipleValues = Array(5);
Question 56
                                                                                            2/2 points
 [ 2 Points] Consider the following JavaScript statements:
  foo = 5;
  bar = "5";
  num1 = foo + bar;
 What will be value of num1?
    55 (numeric)
  ✓ (string)
Question 57
                                                                                            2/2 points
 [2 Points] Consider the following regular expression:
 var pattern = /(^-*\d+\$)|(^-*\d+\.\d+\$)/
 Select the correct description from the various options below.
  ✓ Either zero or more minus signs, followed by one or more digits, or zero or more minus signs followed by one
       or more digits, followed by a dot (.), followed by one or more additional digits, and followed by a dollar sign.
  Either zero or more minus signs, followed by zero or more digits, or zero or more minus signs followed by zero
       or more digits, followed by a dot (.), and followed by one or more additional digits.
  Fither zero or more minus signs, followed by one or more digits, or zero or more minus signs followed by one
       or more digits, followed by a dot (.), and followed by one or more additional digits.
Question 58
                                                                                            0 / 2 points
 [2 Points] Consider the following example from w3schools.com.
   <! DOCTYPE html>
   <html>
   <body>
   <script>
   // x is a string
   let x = "John";
   // y is an object
   let y = new String("John");
   document.getElementById("demo").innerHTML
   typeof x + "<br>" + typeof y;
   </script>
   </body>
```

</html>

What output will be displayed on the page? ⇒ A) string object B) object string X • C) string string O) object object ▼ Hide question 58 feedback See: https://www.w3schools.com/js/tryit.asp?filename=tryjs_string_object Question 59 2 / 2 points [2 Points] Consider the following example from w3schools.com <!DOCTYPE html> <html> <body> <script> // Create an Array: const cars = ["Saab", "Volvo", "BMW"]; // Change an element: cars[0] = "Toyota"; // Add an element: cars.push("Audi"); // Display the Array: document.getElementById("demo").innerHTML = cars; </script> </body> </html> What output will be displayed? Toyota,Volvo,BMW Saab,Volvo,BMW,Audi ✓ Toyota,Volvo,BMW,Audi Saab,Volvo,BMW 2 / 2 points Question 60

[2 Points] Arrays in JavaScript have properties and methods.

✓ ● True False
